About 70% of all innovations in Europe are associated with progress in the fields of materials science and engineering. In the grand challenges that modern societies face, metallic materials occupy key roles.

Overview. Atom probe samples are shaped to implicitly provide a highly curved electric potential to induce the resultant magnification, as opposed to direct use of lensing, such as via magnetic lenses.

Monitoring & Control. The RCT is a real alternative to Current Transformers. Designed for the permanently installed industrial market, the RCT range offers all the advantages of Rogowski Coil technology with the addition of industry standard interfaces for quick and easy connection to process control and monitoring equipment.

Microarray analysis techniques are used in interpreting the data generated from experiments on DNA, RNA, and protein microarrays, which allow researchers to investigate the expression state of a large number of genes - in many cases, an organism's entire genome - in a single experiment.

These images are synthetically generated to maximally activate individual neurons in a Deep Neural Network

(DNN). They show what each neuron “wants to see”, and thus what each neuron has learned to look for.
