

specific heat of liquid pdf

Heat capacity or thermal capacity is a measurable physical quantity equal to the ratio of the heat added to (or removed from) an object to the resulting temperature change. The unit of heat capacity is joule per kelvin, or kilogram metre squared per kelvin second squared $\hat{c} \dots \hat{c} \dots$ in the International System of Units . The dimensional form is $L^2 \dots$

The concept of specific energy is related to but distinct from the chemical notion of molar energy, that is energy per mole of a substance, which uses units of energy per mole, such as J/mol, kJ/mol, or the older (but still widely used) kcal/mol. For a table giving the specific energy of many different fuels as well as batteries, see the ...
