During the exploration phase of any oil and gas field, recognition of borehole type, its completion approach, and understanding of the future reservoir performance are directly interrelated to identification of the reservoir's rock types and flow units.

The basic reefal accretional unit of the Miocene reef complex of Mallorca is the "sigmoid". This is bounded by clear erosion surfaces (the product of sea level lowering and erosion with a matching correlative surface downdip) but has no obvious marine flooding surfaces .

The East Texas Oil Field is a large oil and gas field in east Texas. Covering 140,000 acres (570 km²) and parts of five counties, and having 30,340 historic and active oil wells, it is the second-largest oil field in the United States outside Alaska, and first in total volume of oil recovered since its discovery in 1930. Over 5.42 billion ...

Introduction Heavy oil is defined as liquid petroleum of less than 20°API gravity or more than 200 cp viscosity at reservoir conditions. No explicit differentiation is made between heavy oil and oil sands (tar sands), although the criteria of less than 12°API gravity and greater than 10,000 cp are sometimes used to define oil sands.
