

symbolic and numeric algorithms pdf

In computational mathematics, computer algebra, also called symbolic computation or algebraic computation, is a scientific area that refers to the study and development of algorithms and software for manipulating mathematical expressions and other mathematical objects.

Algorithm design refers to a method or mathematical process for problem-solving and engineering algorithms. The design of algorithms is part of many solution theories of operation research, such as dynamic programming and divide-and-conquer.

A customization point is a code construct that the user can leverage to specialize how a particular library action is handled. A common way of implementing this in C++ is to define a template with the default behavior, and let users specialize it for their own types â€”e.g., `std::hash`â€”.
