The rotational mechanism in an optical drive differs considerably from that of a hard disk drive's, in that the latter keeps a constant angular velocity (CAV), in other words a constant number of revolutions per minute (RPM).

**Optical disc drive - Wikipedia**

Examples. The frequency of the Earth's spinning (once per ~24 hours) is about 12 microhertz (much smaller than 1 Hz). The hertz is sometimes used to measure the power of a processor in computing and electronics.
