The effect of noise on two-dimensional phase unwrapping A phase unwrapper detects the existence of a wrap in an image by calculating the difference phase between two successive samples.

### **Two-Dimensional Phase Unwrapping Problem**

In Two-Dimensional Phase Unwrapping, two internationally acknowledged specialists sort by way of the multitude of ideas and algorithms cluttering current evaluation, make clear clearly how one can treatment half unwrapping points, and current practicable algorithms that could be utilized to points encountered in quite a few disciplines. Full with case analysis and examples along with numerous of pictures and figures illustrating the concepts, this book choices:

applied to the phase unwrapping problem. Two hybrid genetic algorithm methods for solving the two dimensional phase unwrapping problem are proposed and developed in this thesis. The performance of these two algorithms is subsequently compared with several existing methods of phase unwrapping.

2 also been a few attempts at phase unwrapping with neural networks in one-dimension [17, 18] and two dimensions [15, 16], but the two-dimensional techniques have taken several hours to unwrap even simple images. The purpose of this work was to develop a method of phase unwrapping suitable for ODT. ODT systems have

A novel hybrid genetic algorithm (HGA) is proposed to solve the branch-cut phase unwrapping problem. It employs both local and global search methods.
